Stem A nurse is assessing the blood pressure (BP) of a client who has a peripherally inserted central catheter (PICC) in the right arm. What is a priority nursing a Explanation	ac ③ Show Outlines 役 Copy
A brachial artery blood pressure should not be taken on an arm with an intravenous line or with an arteriovenous fistula or shunt. It should also be avoided an axilliary node dissection or mastectomy because the pressure may increase the risk of lymphedema developing on the affected side. The proper interve pressure on the alternate arm if there are not contraindications to doing so.	d i 🖋 Edit
Answer Choices Assess the BP in the right arm	Mark: Do not use
Assess the BP in the left arm V Call the healthcare provider to request an order for assessing the BP in the right thigh Assess BP in one of the lower extremities	Add Question To
